Adolescent Immunization Assessment and AFIX Options Are Here!

With the start of a new year comes new functionality for Florida SHOTS and new benefits for Florida SHOTS users. Easy-to-use adolescent assessment reports as well as assessment report options that conform to the CDC's AFIX standards are now available for providers.

Adolescent assessment options will allow providers to evaluate coverage for recommended and required childhood and adolescent vaccines such as HPV, Tdap, and Meningitis.

Reports using AFIX compatibility allow providers to see immunization levels based on the CDC's national standards, which allows for better assessment, a reduction in missed opportunities, and improved standards of practice.

Florida SHOTS offers several report options once an assessment file is created. Providers can run a "Survey" report that shows their coverage assessment similar to that of the National Immunization Survey—showing coverage levels for compliance

with recommended age-appropriate vaccinations. A "Summary" report displays coverage levels for compliance with each of the recommended age-appropriate vaccination series and several combinations. The AFIX report shows the measurements reported to CDC and any "Missed Opportunities." There is also a customizable "Patient List" report.

All these reports will help providers to see areas of strength and where improvements can be made to standards of practice in order to increase coverage levels and reduce missed opportunities. To learn more about the new reporting options, try out the recorded webinar "[Assessing Immunization Coverage Levels \(AFIX\)](#)" available in the Training section of flshotsusers.com.

STAR USER

It is always nice to know what others who are enrolled in Florida SHOTS have to say about the program. So each issue we'll share with you what some of our top users think about the registry. This feature interview was with Kelly McPhail, Office Administrator, at St. Petersburg Pediatrics in St. Petersburg.

Photo: St. Petersburg Pediatrics, St. Petersburg

What do you think is the best feature of the registry for your office?

Patient searches. Everything is right there on the registry. Also, the easy accessibility and the registry's ability to save everyone time.

What do you think is the best feature of the registry for your patients?

The registry's ability to instantly provide immunization status and also you can see who is not up to date.

How have you implemented Florida SHOTS into your daily workflow?

We are in the registry using it all day long. When new patients come to our practice, we use it to get their shot records.

What are some of the benefits of using Florida SHOTS' bidirectional, real-time interface?

Well, for one thing, it helps us provide insurance companies with instant, accurate immunization verification information.

It also helps us with VFC reporting and ordering.

If another doctor's office were to call and ask you why they should enroll in the registry, what would you say?

It is a simple, effective site to find your patients' vaccine requirements and history.

For more information about how you can participate, please call the Florida SHOTS enrollment desk at **(877) 888-SHOT**.

DATA UPLOAD PARTICIPANT

HealthFusion MediTouch Users:

If your office uses HealthFusion MediTouch, you can implement data upload. **HERE'S HOW:**

1. To obtain the HealthFusion MediTouch interface, call [877-523-2120](tel:877-523-2120).
2. To implement your real-time connection with Florida SHOTS, contact Colleen Tully at Colleen.Tully@flhealth.gov or [904-755-5167](tel:904-755-5167).

Welcome Aboard!

We here at Florida SHOTS would like to wish a warm welcome to all the new practices that have recently enrolled. In this issue we are highlighting another member of Florida SHOTS who is a HealthFusion MediTouch data upload participant.

Mary Reynolds, Account Manager, AbraKIDabra Pediatrics, Spring Hill, Florida, says the registry has become an invaluable asset to her practice, particularly since their locations participate in VFC and real-time bidirectional web services. The MediTouch interface allows the office to have all of their VFC data elements uploaded with their vaccination information.

"Our practice's physicians were the first ones to know about the benefits of the registry. They believe very strongly in

Florida SHOTS and its ability to move the needle on immunization rates statewide.

Using Florida SHOTS has been easy. When we switched to HealthFusion, we had no problems. It was a seamless transition to bidirectional functionality.

We would recommend every doctor's office enroll in the registry and data upload, because for the health and wellbeing of Florida's children, Florida SHOTS is an invaluable resource."

Did You Know?

Florida SHOTS provides real-time user support in Spanish!

Providers and county health departments can head to our website flshotsusers.com to access Spanish-language training videos, guides, as well as live and recorded webinars. To switch from English to Spanish, just click on the “Español” tab on the left side of the screen. Our [bilingual online resources](#) are available 24/7 and can be completed at your pace and on your schedule.

Tech Tips

How can I learn about the 2016 VFC requirements requiring VFC providers to enter their vaccine administration data manually or through an upload from their electronic health records software into Florida SHOTS?

To help VFC participants with these changes, Florida SHOTS has published an updated “**VFC Dose Accountability Quick Tips**” guide. You can find it by clicking on the “**Training**” tab and selecting “**Guides**” at flshotsusers.com.

Participating Software Providers

These software companies have created data exchange capabilities between Florida SHOTS and their EMR, practice management, or billing software. For a definition of capabilities by certification level, see “Participating Software Companies” at www.flshotsusers.com.

UPLOAD UPDATE

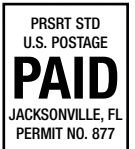

247 MILLION+ SHOTS

As of February 5, 2016, we've processed more than 247 million shots via data upload from 1,900+ participating healthcare providers and multiple insurance organizations. There are also 661 live web services (real-time) connections through 48 EHRs.

Interested in learning more about how your practice management or EHR software could be set up to upload shot data to the registry? Check out page 3 of this issue to see which software companies are currently participating, or visit www.flshotsusers.com for current data upload information.

Florida SHOTS Enrollment:
Fast. Easy. Free.
www.flshots.com/enrollment

DON'T WAIT. DON'T DELAY.
**COMPLETE RECORDS
CAN SAVE THE DAY!**

HELP ENSURE A HEALTHY FUTURE.

Providing complete historical shot data helps make Florida SHOTS more effective for patients and providers. For VFC providers, that also means including manufacturer and lot number information for every VFC shot. If you're a data upload participant make sure you're using correct VIS dates and combinations of CVX/CPT codes. Fully completing all new and historical shot records leads to better clinical practices, better health, and a better Florida SHOTS registry!

COMPLETE.

CORRECT.

CURRENT.
